

Create Table API

API endpoint

POST <https://console.catalyst.zoho.com/baas/v1/project/{projectId}/table>

Path parameters

Name	Type	Required	Description
projectId	string	Yes	The unique identifier of the Catalyst project

Headers

Name	Type	Required	Description
Authorization	string	Yes	OAuth 2.0 Bearer token (Zoho-oauthtoken <ACCESS_TOKEN>)
Environment	string	Yes	Catalyst project environment (e.g., Development, Production)
Catalyst-org	integer	Yes	The Catalyst organization identifier
Content-Type	string	Yes	application/json

Request body

```
{
  "table_name": "Customers",
  "table_scope": "GLOBAL"
}
```

Body fields

Field	Type	Required	Description
table_name	string	Yes	Human-readable name for the table
table_scope	string (enum)	No	Access scope: GLOBAL, ORG, or USER. Defaults to GLOBAL.

Sample cURL

```
curl -X POST "https://console.catalyst.zoho.com/baas/v1/project/{projectId}/table" \
-H "Authorization: Zoho-oauthtoken <ACCESS_TOKEN>" \
-H "Environment: Development" \
-H "Catalyst-org: 123456" \
-H "Content-Type: application/json" \
-d '{
  "table_name": "Customers",
  "table_scope": "GLOBAL"
}'
```

Scope

ZohoCatalyst.tables.CREATE

Create Column API

API endpoint

POST <https://console.catalyst.zoho.com/baas/v1/project/{projectId}/table/{id}/column>

Path parameters

Name	Type	Required	Description
projectId	string	Yes	The unique identifier of the Catalyst project
id	string	Yes	The unique identifier of the table

Headers

Name	Type	Required	Description
Authorization	string	Yes	OAuth 2.0 Bearer token (Zoho-oauthtoken <ACCESS_TOKEN>)
Environment	string	Yes	Catalyst project environment (e.g., Development, Production)
Catalyst-org	integer	Yes	The Catalyst organization identifier
Content-Type	string	Yes	application/json

Request body

The body is an array of column objects (supports bulk creation). Required fields vary by data_type.

```
[
  {
    "column_name": "FullName",
    "data_type": "varchar",
    "max_length": 100,
    "is_mandatory": "true",
    "is_unique": "false",
    "search_index_enabled": "true",
    "audit_consent": "false"
  },
  {
    "column_name": "Email",
    "data_type": "varchar",
    "max_length": 255,
    "is_mandatory": "true",
    "is_unique": "true",
    "search_index_enabled": "true",
    "audit_consent": "true"
  }
]
```

Supported data types: text, varchar, date, datetime, int, double, boolean, bigint, encrypted text, foreign key

Required fields by data type

Data type	Required fields
text	column_name, data_type, is_mandatory, audit_consent

Data type	Required fields
encrypted text	column_name, data_type, is_mandatory, audit_consent
varchar	column_name, data_type, is_mandatory, audit_consent, is_unique, search_index_enabled
int	column_name, data_type, is_mandatory, audit_consent, is_unique, search_index_enabled
bigint	column_name, data_type, is_mandatory, audit_consent, is_unique, search_index_enabled
date	column_name, data_type, is_mandatory, audit_consent, search_index_enabled
datetime	column_name, data_type, is_mandatory, audit_consent, search_index_enabled
double	column_name, data_type, is_mandatory, audit_consent, search_index_enabled
boolean	column_name, data_type, is_mandatory, audit_consent, search_index_enabled
foreign key	column_name, data_type, parent_table, parent_column, is_mandatory, audit_consent, search_index_enabled

Common optional fields

Field	Type	Description
description	string	Human-readable description of the column
default_value	string	Default value assigned when no value is provided
max_length	integer	Maximum length (applies to varchar)
decimal_digits	integer	Number of decimal places (applies to double)
constraint_type	string	ON-DELETE-SET-NULL or ON-DELETE-CASCADE (for foreign key)

Note: Boolean-like fields (is_mandatory, is_unique, audit_consent, search_index_enabled) must be sent as strings: "true" or "false".

Sample cURL

```
curl -X POST "https://console.catalyst.zoho.com/baas/v1/project/{projectId}/table/{id}/column" \
-H "Authorization: Zoho-oauthtoken <ACCESS_TOKEN>" \
-H "Environment: Development" \
-H "Catalyst-org: 123456" \
-H "Content-Type: application/json" \
-d '[
  {
    "column_name": "FullName",
    "data_type": "varchar",
    "max_length": 100,
    "is_mandatory": "true",
    "is_unique": "false",
    "search_index_enabled": "true",
    "audit_consent": "false"
  }
]'
```

Scope

ZohoCatalyst.tables.columns.CREATE
